## Vietnam Soybean Imports Reduced on Lower Meal Consumption

Estimates for 2023 (MY 2022/23) Vietnam soybean and soybean meal imports are each cut approximately 200,000 tons this month. Soybean meal imports have fallen to 6-year lows, while soybean imports declined for a second consecutive year. Much of this decline can be attributed to higher feed prices leading to weaker demand for aquaculture production and also early hog slaughter. In early 2023, high soybean meal prices and lower demand from the livestock sector reduced soybean meal consumption. By summer 2023, crush margins in Vietnam turned negative due to readily available palm oil and a decline in soybean meal prices, particularly from South America. These combined factors supported above

average soybean meal imports. Hog slaughter accelerated in fall 2023 over concerns of increased African swine fever outbreaks as well as persistently low hog prices that forced some smaller producers to liquidate herds and exit the marketplace. Demand for soybean and soybean meal imports fell as a result in marketing year 2022/23.

In 2024 (MY 2023/24), Vietnam soybean imports are expected to increase to 2.1 million tons on growing crush and rebounding soybean meal consumption. Similarly, soybean meal imports are expected to

Vietnam Soybean and Soybean Meal Outlook

increase to 5.3 million tons on abundant global soybean meal exportable supplies particularly from India, Argentina, and the United States. This represents an almost 250,000-ton year-over-year increase for soybean imports and a 500,000-ton year-over-year increase for soybean meal imports. Vietnam soybean crush estimates, while still increasing in 2024, are cut 500,000 tons to 1.4 million due to abundant soybean meal available internationally. Soybean imports were reduced in line with this change.

## Brazil Soybean Exports Climb While U.S. Prospects Decline

Sources: Trade Data Monitor, LLC; U.S. Census Bureau; USDA AMS

This month, 2023/24 Brazil soybean production is cut 1.0 million tons to 156.0 million, yet exports are raised 500,000 tons to a record 100.0 million. The export forecast change comes on the heels of record October-January shipments, combined at over 17.0 million tons. The record volumes reflect abundant carryin supplies from the previous record soybean crop, now estimated at 162.0 million tons.

Brazil early-season shipments are 6 percent higher than the previous record from 2017/18 when China imposed retaliatory tariffs on the United States, and Argentina soybean supplies were tight. Larger 2023/24 carryin supplies and abundant new crop prospects allow Brazil to continue exporting with highly competitive prices, reaching \$400 per ton in early February 2024, compared to U.S. export prices at \$467.

Meanwhile, September-January U.S. soybean shipments have dropped 23 percent compared to last year with typical U.S. sales to China mostly replaced by Brazil exports. As a result, the U.S. export forecast for 2023/24 is cut this month by 950,000 tons to 46.8 million.

## OVERVIEW FOR 2023/24

The global oilseeds production forecast is lowered this month to 659 million tons on large reductions in Brazil soybean and China sunflowerseed crops, more than offsetting higher Bolivia soybean and India rapeseed crops. Global oilseeds trade is down slightly to 197 million tons on lower U.S. soybean exports, despite higher Brazil soybean exports. Ending stocks are up more than 2 million tons due to increases in U.S. and Brazil soybean and Australia rapeseed ending stocks. Oilseed crush is down slightly on lower China sunflowerseed and Vietnam soybean processing with increases in India rapeseed and soybean crush. Global protein meal exports are forecast up on higher exports of soybean and rapeseed meal from India. Vegetable oil trade is slightly down on lower Malaysia palm oil exports.

The projected U.S. season-average farm price for soybeans is lowered 10 cents to \$12.65 per bushel.

## EXPORT PRICES

Soybean prices dropped in the past month with the Brazil harvest proceeding at a faster than average pace and import demand falling behind as much of Asia slows purchases before Lunar New Year. Soybean meal prices moved in tandem with soybean prices. Soybean oil declined in line with price movement in the soybean complex. Argentina and Brazil soybean oil is trading at 3-year lows as demand ebbs with many key buyers sitting on ample stocks. Palm oil prices continued to rise with a seasonal drawdown in Malaysia production and stocks. Black Sea sunflowerseed oil prices were up after a strong selling season has reduced stocks, narrowing the discount compared to soybean and rapeseed oil.

## OTHER NOTES

**Marketing Years (MY):** MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

**Stocks:** Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

**Consumption:** World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

**Trade:** All PSD tables are balanced on the different local marketing years.
