

# Cotton: World Markets and Trade

## Global 2021/22 Imports and Consumption Lowered Significantly Since January

Global 2021/22 trade and consumption are down once again this month, reflecting recently published trade data and evolving expectations for the rest of the marketing year. Imports are lowered for the seventh consecutive month and consumption is lowered for the fourth consecutive month, especially for top cotton consumers including China, Pakistan, Vietnam, and Bangladesh. Prospects for the world's largest importing country, China, have declined notably since the start of the calendar year (see last month's [Cotton: World Markets and Trade](#) for more information).

Global consumption prospects have declined as negative macroeconomic forces dampen consumer demand for goods as greater demand for services is manifest and combined with higher inflation. The World Bank and the Organization for Economic Co-operation and Development have downgraded their global economic outlooks recently relative to forecasts from earlier this year, and the International Monetary Fund has signaled a decline in its projections later this month. Lower consumption prospects can also be attributed to a combination of factors including the recent price rally of cotton, high container rates and limited supply, and rising inflation and interest rates globally, including the Federal Reserve's recent actions.

Lower production, late crops, logistical delays, and stalled negotiations related to late shipments are also impeding global trade. Major exporters including India and Australia are dealing with these issues in the current marketing year, with India production down and therefore having less supplies available to ship, and Australia's crop being later than expected and delaying shipments.

Future cotton lint production and consumption continue to be suppressed by weaker demand for cotton products. Moving forward, however, global imports are expected to rebound next year owing to an increase in exportable supplies though use will remain flat.

## 2022/23 Outlook

Global production is lowered 1.2 million bales to just over 120 million bales with a marked decline in the U.S. crop and a slight decline for Brazil. Global use is down 1.6 million bales due primarily to declines in Bangladesh, China, India, and Vietnam, and ending stocks are increased 1.5 million bales. Global trade is down, with imports and exports decreasing 1.1 million bales each.

The U.S. balance sheet shows lower production, exports, and ending stocks. Abandonment in Texas (which accounts for more than one-half of U.S. plantings) is expected to surge. The projected U.S. season-average farm price is unchanged at 95 cents per pound.

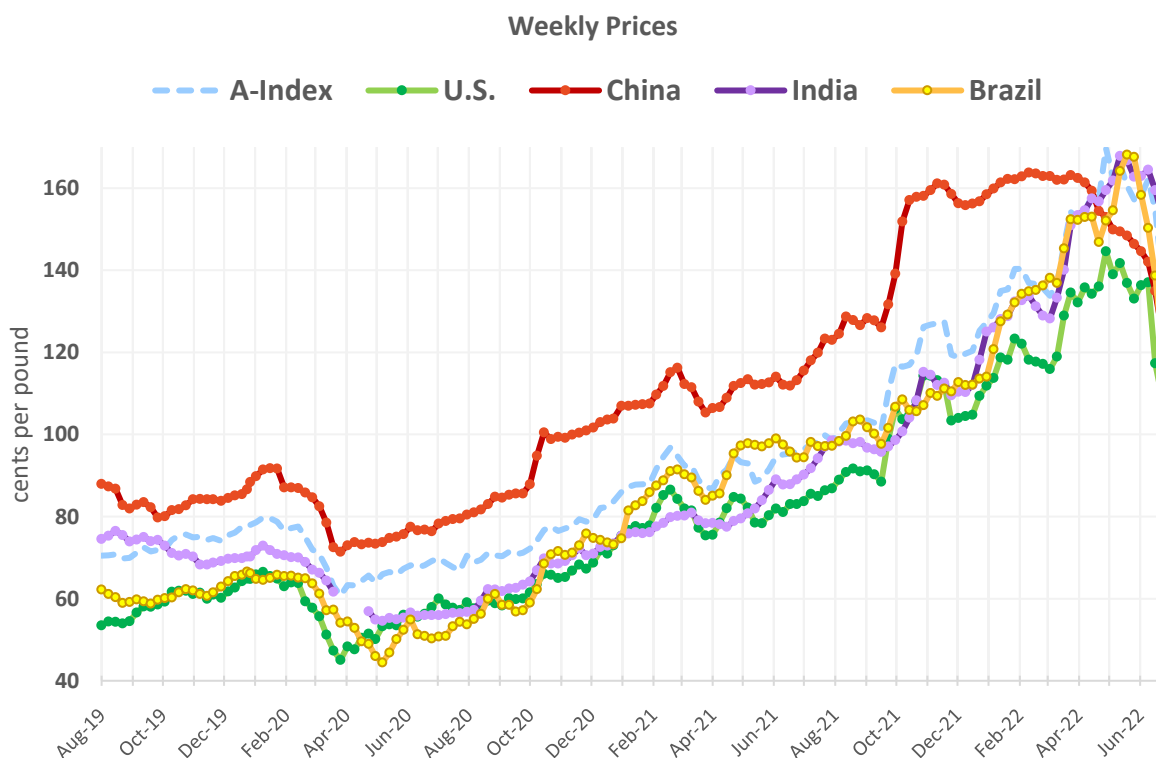

For current prices received by farmers click here: [NASS farm price](#)

## 2021/22 Outlook

Global production is lowered 725,000 bales from last month due primarily to a decline in Brazil. Global use is down 1.9 million bales, and ending stocks are up over 1.0 million bales. Global trade is down with a 1.3-million-bale drop in imports and 1.2-million-bale drop in exports. Notable decreases in imports are seen in Bangladesh, China, India, and Vietnam; exports are down from Australia, India, Mali, and the United States.

The projected U.S. season-average farm price is unchanged at 92 cents per pound.

## Global Cotton Prices

Notes: **A-Index** is the average of the five cheapest quotations (quality being Middling  $1^{1/8}$ ) for Cost and Freight (CFR) at a Far Eastern Port (more information [here](#)); **U.S.** is the simple average of spot quotations reported by the

Agricultural Marketing Service (more information [here](#)); **China** is the reported China Cotton Price Index (i.e. CCIndex 3128B) and reflects the national weighted average of cotton (3128B grade) delivered to more than 200 enterprises in China; **India** is the Shankar-6 (grade 29-3.8-76) spot price reported [here](#); **Brazil** is the delivered price in São Paulo city (grade strict low middling).

**Changes Since Jun. WASDE** (cents per pound)

	A-Index	U.S.	China	India	Brazil
7-Jun	156.1	132.0	145.5	161.7	158.8
8-Jul	132.2	107.3	119.9	140.0	113.7
<b>Change</b>	<b>-23.9</b>	<b>-24.7</b>	<b>-25.7</b>	<b>-21.7</b>	<b>-45.1</b>

Global cotton prices plummeted relative to last month’s WASDE. This was attributed to a significant selloff in commodity markets and the transition from old to new crop on the Intercontinental Exchange (ICE). The Bloomberg Commodity Spot Index fell more than 20 percent this month and supports the notion of a significant selloff in commodity markets. Cotton futures at this point last month signaled a substantial inversion, and global spot prices now reflect this. The new crop Cotton No.2 December 2022 contract (now having the highest open interest) was roughly 25 cents lower than the July 2022 contract at this point last month. All origins dropped over 20 cents with Brazil witnessing the most dramatic downfall of over 40 cents. Nonetheless, prices remain historically high.
