

# Cotton: World Markets and Trade

## China's Sluggish Yarn Imports Signal Slowing Global Cotton Consumption

Note: ROW (Rest of World); Source: China's General Administration of Customs

China is by far the largest cotton yarn importer and thus a major driver of global cotton lint consumption. China's spinning mills do not produce enough yarn for production of fabric that is ultimately cut and sewn into apparel, and therefore, the gap in yarn supply is supplemented by imports.

This calendar year, yarn imports have plunged. From January to September 2022, China imports of cotton yarn fell by nearly half from the same period last year. This decline is equivalent to roughly 3.5 million bales of cotton lint and is the lowest level in more than a decade. Lower yarn imports and domestic cotton consumption are driven in part by domestic COVID lockdowns, foreign trade policies barring imports of China's cotton products, and slowing global demand for apparel. Slower domestic and foreign demand for China's apparel is exhibited by slowing domestic apparel sales and cotton product exports, which each fell 5 percent in January-September 2022 compared with the previous year.

The decline in China yarn imports has helped to lower cotton consumption in major yarn exporting countries which include India, Vietnam, Pakistan, and Uzbekistan. China was the largest foreign market for each major yarn exporter last calendar year.

Chinese yarn prices are relatively lower than similar quality grades for imported yarn, a departure from recent history. China's lower domestic cotton lint prices and COVID lockdowns have pressured domestic yarn prices and made imports less competitive.

China yarn imports have recently been a recent bellwether for global cotton consumption growth prospects, and plummeting cotton yarn import demand is helping to pressure 2022/23 global cotton

use. World cotton lint consumption is projected at 114.9 million bales, down 2.4 million bales from last year and 8.2 million below the level witnessed 2 years ago.

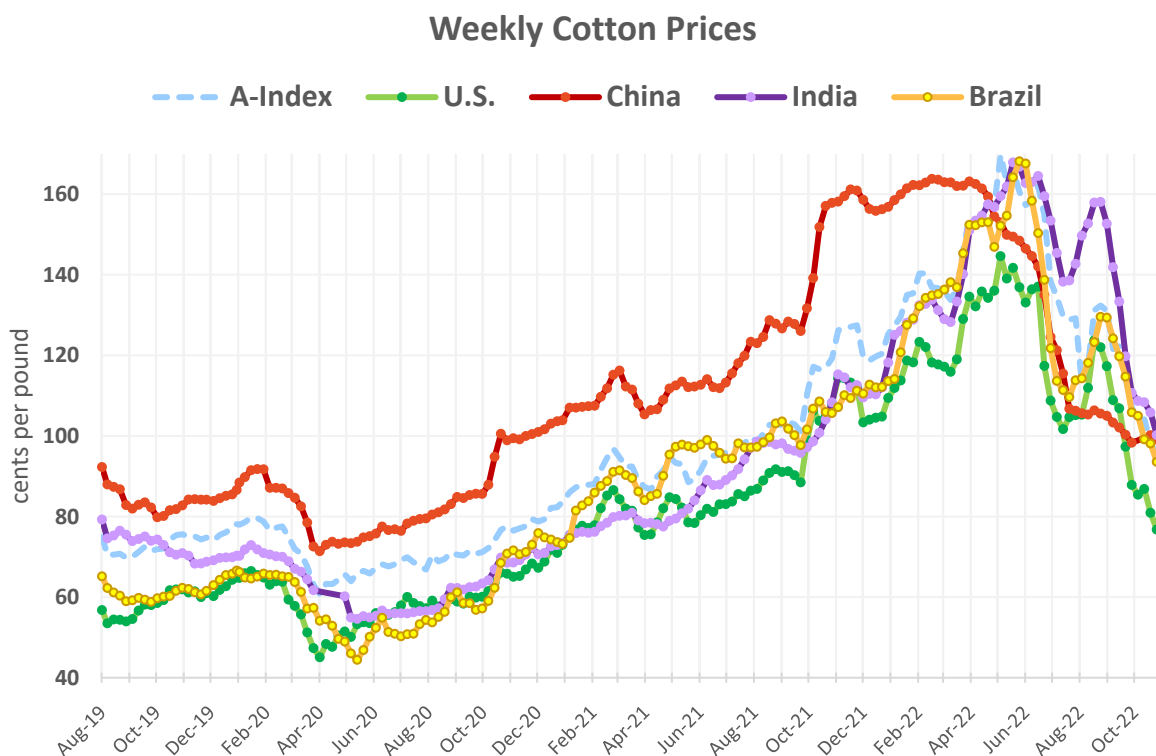

### 2022/23 Outlook

Global production is down 1.6 million bales from the previous month to 116.4 million, largely owed to production falling 700,000 bales in Pakistan. This is the third consecutive month Pakistan production has fallen and is supported by weak arrivals data. Global stocks are forecast down slightly this month but higher than the previous year. Consumption is down 650,000 bales with lower projected use in major consuming countries including Pakistan and Bangladesh and is the sixth consecutive global decline. Global trade is down slightly, led by a decline in Bangladesh, but still remains higher from the previous year.

The U.S. balance sheet shows slightly higher production and ending stocks relative to the previous month. Production is projected at 14.0 million bales, up over 200,000 compared with last month but 3.5 million bales lower compared with the previous year. The projected U.S. season-average farm price is forecast down 5 cents to 85 cents per pound.

### Global Cotton Prices

Notes: **A-Index** is the average of the five cheapest quotations (quality being Middling 1<sup>1/8</sup>) for Cost and Freight (CFR) at a Far Eastern Port (more information [here](#)); **U.S.** is the simple average of spot quotations reported by the Agricultural Marketing Service (more information [here](#)); **China** is the reported China Cotton Price Index (i.e. CCIndex 3128B) and reflects the national weighted average of cotton (3128B grade) delivered to more than 200

enterprises in China; **India** is the Shankar-6 (grade 29-3.8-76) spot price reported [here](#); **Brazil** is the delivered price in São Paulo city (grade strict low middling).

**Changes Since October WASDE (cents per pound)**

	A-Index	U.S.	China	India	Brazil
10-Oct	102.6	89.1	98.2	110.8	101.4
7-Nov	104.1	87.3	96.8	102.2	98.0
<b>Change</b>	<b>1.6</b>	<b>-1.8</b>	<b>-1.4</b>	<b>-8.6</b>	<b>-3.1</b>

Global cotton prices were mostly unchanged compared with last month’s WASDE but experienced significant volatility. The nearby December 2022 contract on the Intercontinental Exchange (ICE) fell over 15 cents to 72 cents but surged back to a level above 85 cents. In the most recent Commodity Futures Trading Commission report for November 1, non-commercial traders held a significant number of short positions on the futures exchange before prices went limit up for 3 consecutive days. The potential “short squeeze” likely induced greater buying in the futures market and boosted prices. Moreover, the prospective convergence of spot and futures prices has also supported prices, i.e. as the nearby contract moves towards its last day of options trading (November 11) and First Notice Day (November 23).
