Peru Fish Meal Exports at Lowest Level Since 2015/16 El Niño

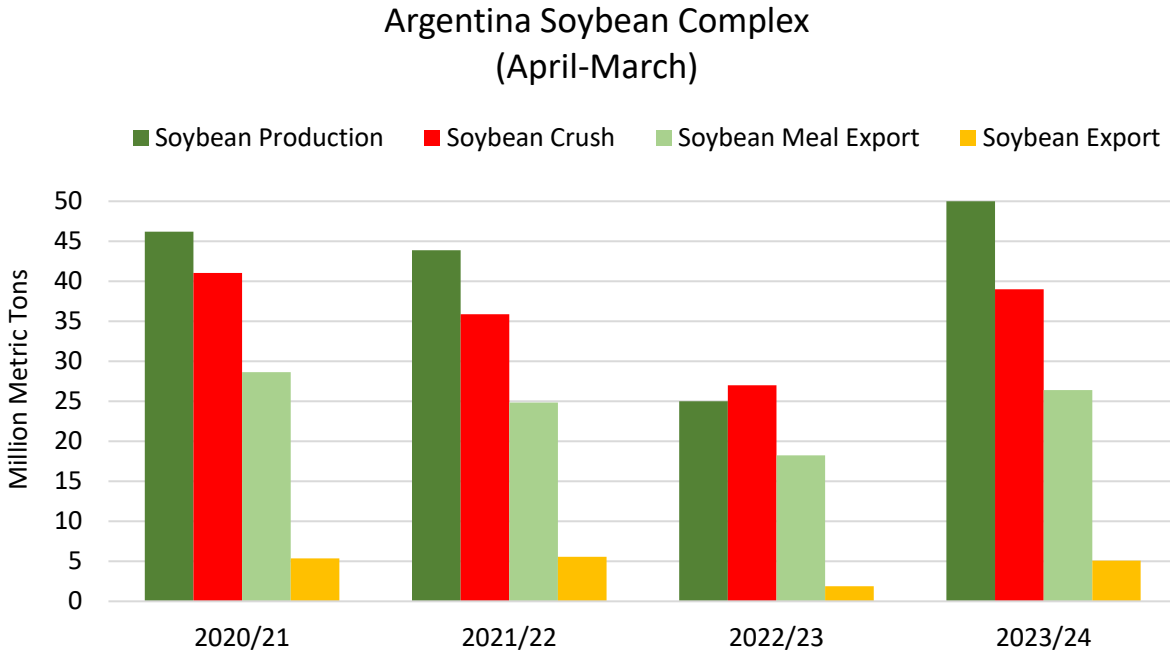

Source: Trade Data Monitor LLC

Based off current fishery conditions data, Peru fish meal export forecast is cut 300,000 tons to 800,000 in 2024. The closure of this year's first fishing season for anchovy in Peru confirmed that 2023 was a smaller year for Peru fish meal exports. In June 2023, the government of Peru cancelled the first and main anchovy fishing season due to a high prevalence of juvenile anchovies present in the exploratory season that proceeds the opening of the main season on the northern coast. The closure caused Peru fish meal exports to drop to negligible levels over the Southern Hemisphere winter, usually the largest shipping window. The second season opened in late October with 1.7 million tons of quota for anchovies. By the end of December, the second season has thus far landed over 1.1 million tons of anchovies, compared to the same season in early 2023 when over 1.8 million were landed.

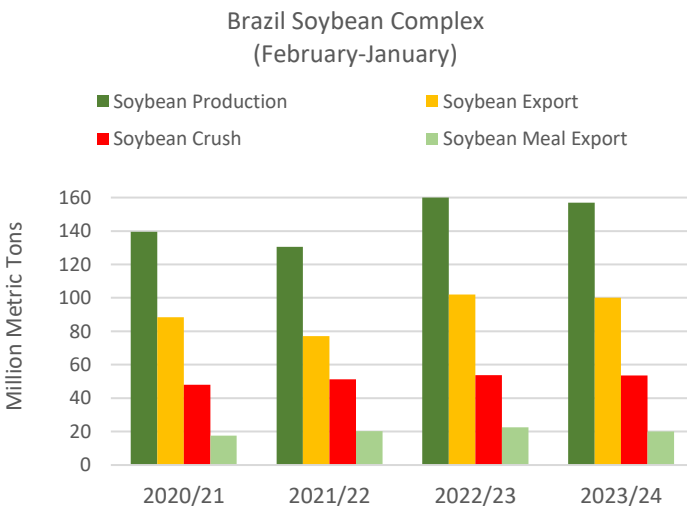

As the largest importer of fish meal in the world, China has been the most impacted. Typically, Peru supplies about half of China fish meal imports. However, from January-November 2023, Peru supplied just 27 percent. This shortfall forced China to diversify suppliers, increasing shipments from Vietnam, Russia, Thailand, India, Chile, Mexico, and the United States. Looking ahead to 2024, the outlook for fish meal production in Peru is reduced by 300,000 tons. The final season in 2023 had high levels of juveniles present in the catch, in excess of levels considered acceptable. This unbalanced fish population coupled with the lingering effects of the El Niño reduces export expectations for Peru in 2024 by 300,000 tons to the same level as 2023.

Recovery in Argentina Soybean Production Sends Crush and Product Exports Higher

This month, 2023/24 Argentina soybean production is raised 2 million tons to 50 million. As a result, soybean crush volume is lifted 1 million tons. Returning to normal production following last year's historic drought, Argentina crush is forecast higher with exports of soybean meal and oil also projected to rise. Meanwhile, Brazil soybean production is cut 4 million tons to 157 million as hot and dry weather in recent months strained the crop in key growing regions. With production prospects declining, Brazil soybean crush and meal and oil output are revised down significantly this month. All of the above changes were made on both local crop year (February-January for Brazil, April-March for Argentina) and marketing year (October-September).

With Argentina recovery and large Brazil carryin from the previous harvest, shrinking crop prospects in Brazil are unlikely to have significant implications on global meal and oil trade in 2023/24. After ramping up crush for the last 2 years and backfilling for Argentina, Brazil is projected to return to more normal crush volumes and export patterns. With growing domestic industrial soybean oil consumption, reduced crush will send oil exports lower. On the meal side, exports are expected down, while domestic consumption remains strong and meal stocks are projected to rebound.

OVERVIEW FOR 2023/24

The global oilseeds production forecast is lowered this month to 660 million tons on large reductions in the Brazil soybean crop and sunflowerseed for Argentina, EU, and Russia, more than offsetting higher Argentina and U.S. soybean crops. Global oilseed trade is up slightly on higher Russia and Paraguay soybean exports, more than offsetting lower Russia sunflowerseed exports. Global oilseed ending stocks are down slightly on large reductions in Brazil and India soybean and Russia sunflowerseed, not offset by higher Argentina and U.S. soybean carryout. Oilseed crush is down slightly on lower Brazil soybean and EU sunflowerseed crush despite higher Argentina and India soybean crush. Global meal production is lowered, but meal exports are unchanged with higher Argentina and India soybean meal exports offset by lower Brazil soybean meal and Peru fish meal exports. Vegetable oil trade is slightly up with higher Argentina soybean oil and Canada rapeseed oil more than offsetting lower Brazil soybean oil exports. The projected U.S. season-average farm price for soybeans is down 15 cents to \$12.75 per bushel.

EXPORT PRICES

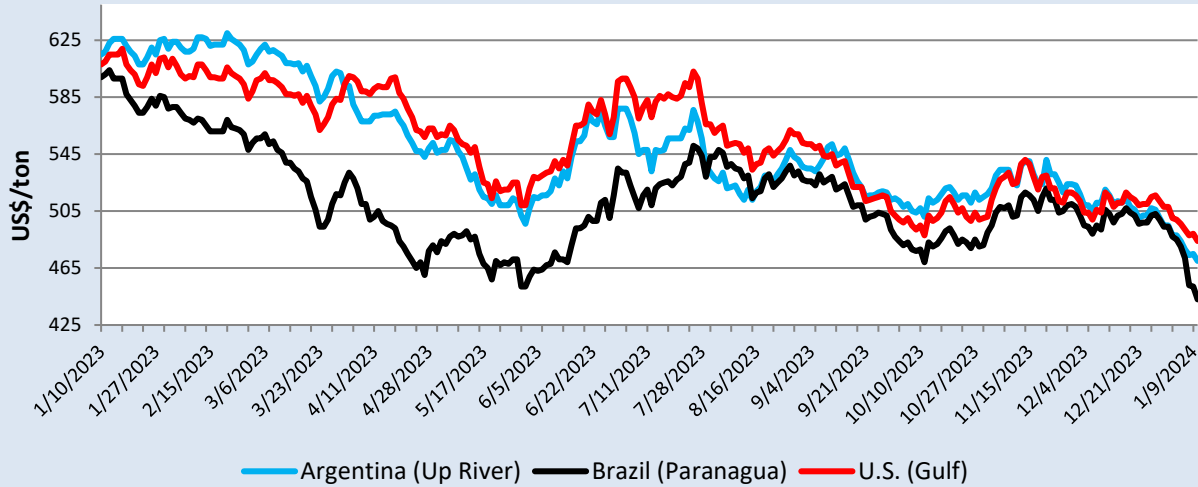

Soybean prices were down since the last WASDE report on better prospects for Argentina and Paraguay soybean production as well as rainfall in Brazil in the last week of December. Soybean meal prices moved in tandem with soybean prices. Although soybean crush was strong in the United States, Argentina processing continues to be very low. Vegetable oil prices diverged somewhat in the past month. Palm oil prices were up slightly on strong India purchases and a seasonal draw down in Malaysia crude palm oil stocks. Soybean oil dropped significantly as crude oil remains near annual lows and biofuel producers switched to lower-cost alternative feedstocks. Ample Black Sea sunflowerseed oil supplies further pressured vegetable oil prices, with Ukraine sunflowerseed oil maintaining a significant discount compared to alternative origins.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
