

# Cotton: World Markets and Trade

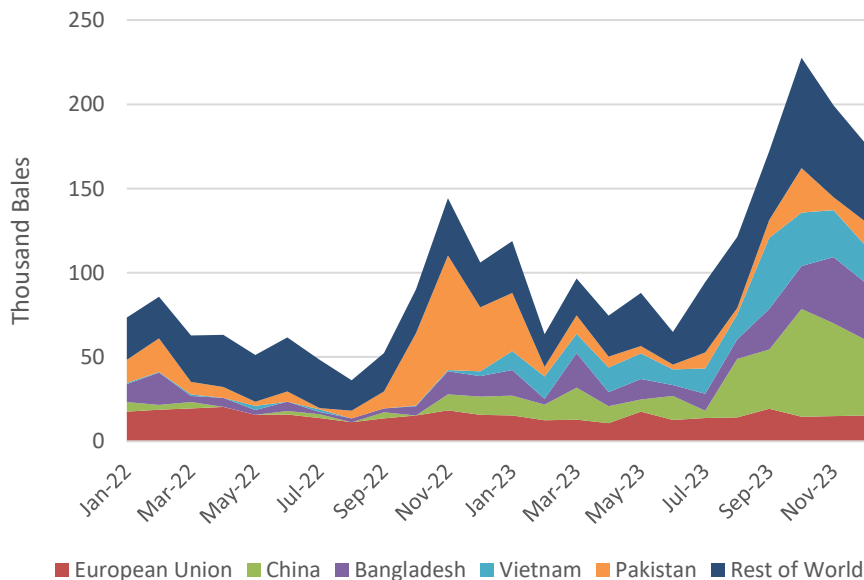

## Turkey Cotton Exports Rise as Domestic Use Falls

In marketing year 2023/24, Turkey is forecast to be the fifth largest exporter and consumer of cotton. Cotton exports have doubled in the past 2 years to the highest level in nearly 50 years while [domestic use](#) has fallen to a 5-year low. The decline in domestic use is mostly due to the February 2023 earthquake in southern Turkey, domestic inflationary pressure, and lower global demand for cotton products.

Turkey is forecast to export 1.3 million bales of cotton this year, in part driven by a tenfold increase in shipments to China in the first 5 months of the marketing year compared to the same period in the previous year. Turkey's competitive prices relative to other major exporters have boosted shipments to China; this contrasts with being one of the more expensive suppliers last year. Turkey cotton exports to Bangladesh, Vietnam, and Indonesia have also risen dramatically due to competitive prices.

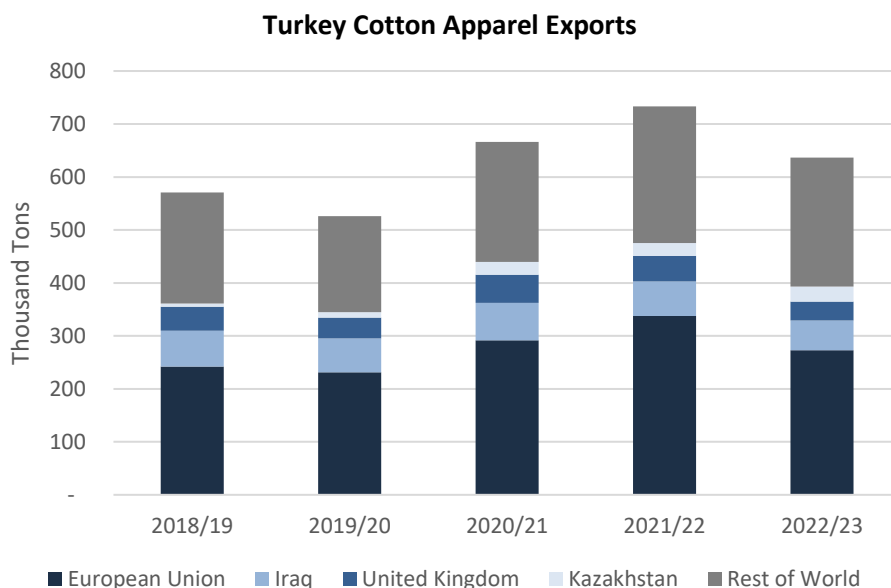

## Top Markets for Turkey Cotton Exports

Source: Trade Data Monitor, LLC.

The expected rise in exports is offset by a projected decline in domestic use. The fall in Turkey cotton consumption accompanies a lower volume of cotton apparel exports in marketing year 2022/23 and a 15-percent decline in the first 5 months of this marketing year. The volume of cotton [textile](#) exports also fell in marketing year 2022/23 but has remained stable so far this marketing year.

One factor pressuring consumption is last year’s earthquake in Southern Turkey which caused damage to regions accounting for approximately half of Turkey’s cotton yarn production. Yarn producers reportedly needed 2-12 months for repairs before restarting production. Additionally, interest rates, labor costs, and other input costs have been rising in Turkey, dampening its competitive edge compared with other exporters of cotton apparel.

Source: Trade Data Monitor, LLC.

In addition to constraints in the production of yarn, demand for cotton apparel exports from Turkey has fallen. Economic growth has stagnated in the European Union, the top market for Turkey cotton apparel exports, and consumers are spending less on apparel and other discretionary purchases. The United Kingdom, another major export market for Turkey cotton apparel, entered a recession in the second half of 2023.

The increase in Turkey cotton exports this year may be an aberration due to competitive prices. Future shipments are expected to decline as Turkey cotton consumption and cotton apparel exports rebound from depressed levels.

### 2023/24 Outlook

Global production is up about 100,000 bales to 113.0 million as a larger crop in India more than offsets lower production in the United States and Argentina. India production is projected up 500,000 bales to 25.5 million bales but still down slightly from the previous year. U.S. production is projected down over 300,000 bales to 12.1 million bales, the lowest level in nearly 40 years.

Consumption is raised nearly 500,000 bales to 112.9 million. China consumption is forecast up 500,000 bales due to strong imports, and India consumption is projected up 300,00 bales on higher production.

Global trade is up nearly 400,000 bales to 43.2 million as China imports and India exports are both raised this month. China imports are forecast up 900,000 bales to 12.9 million, more than double the previous year's level. This is partially offset by lower Pakistan and Turkey imports, each reduced by 200,000 bales due to lower consumption. India exports are raised 400,000 bales on a larger crop and competitive prices.

Global ending stocks are forecast down over 300,000 bales to 83.3 million with reductions in India, Pakistan, and the United States offsetting a projected rise in China.

The U.S. farm price remains at 77 cents per pound.

### 2023/24 Trade Outlook (1,000 480-lb Bales)

#### Major Importers:

	Previous	Current	Change	Reason
<b>WORLD</b>	42,881	<b>43,236</b>	355	
<b>China</b>	12,000	<b>12,900</b>	900	Higher consumption
<b>Pakistan</b>	3,600	<b>3,400</b>	-200	Lower consumption
<b>Turkey</b>	4,000	<b>3,800</b>	-200	Lower consumption

#### Major Exporters:

	Previous	Current	Change	Reason
<b>WORLD</b>	42,873	<b>43,263</b>	390	
<b>India</b>	1,600	<b>2,000</b>	400	Competitive prices
<b>Argentina</b>	700	<b>600</b>	-100	Lower production
<b>Australia</b>	5,650	<b>5,750</b>	100	Strong export data
<b>Azerbaijan</b>	500	<b>400</b>	-100	Weak export data
<b>Turkey</b>	1,150	<b>1,250</b>	100	Competitive prices

#### Futures and Spot Prices

Cotton futures rose to their highest level since September 2022 with the nearby May 2024 contract on the Intercontinental Exchange (ICE) settling at roughly \$1. The lowest projected U.S. supplies in nearly 40 years coupled with strong shipments and outstanding sales boosted prices. Commodity indices were moderately higher compared with last month, further supporting the exuberant fundamental outlook for U.S. cotton (only deliverable origin on ICE). Like last month, greater speculative buying further supported higher prices. The latest Commodity Futures Trading Commission *Commitment of Traders* supplemental [report](#) for futures and options showed that the net long position for both Non-Commercial and Index traders surged to the highest level in 2 years at over 140,000 contracts (nearly 15.0 million bales). This is significantly higher compared with roughly 45,000 contracts 2 months ago.

## Weekly ICE Cotton Futures and Bloomberg Commodity Spot Index

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

### Changes Since February WASDE (cents per pound)

	A-Index	U.S.	China	India	Brazil	Pakistan
6-Feb	95.6	84.0	107.4	85.5	80.4	89.1
6-Mar	101.1	89.9	108.4	93.9	86.0	93.5
<b>Change</b>	<b>5.5</b>	<b>5.9</b>	<b>1.0</b>	<b>8.4</b>	<b>5.6</b>	<b>4.4</b>

**U.S.** prices are up more than 5 cents to roughly 90 cents per pound. Basis is down across most regions with the Southeast dropping to -175 basis points compared with -25 last month. North and South Delta dropped to -275, and West Texas-Kansas-Oklahoma declined to -750 from -500. Average basis across U.S. regions is around -550 points compared with -350 last month.

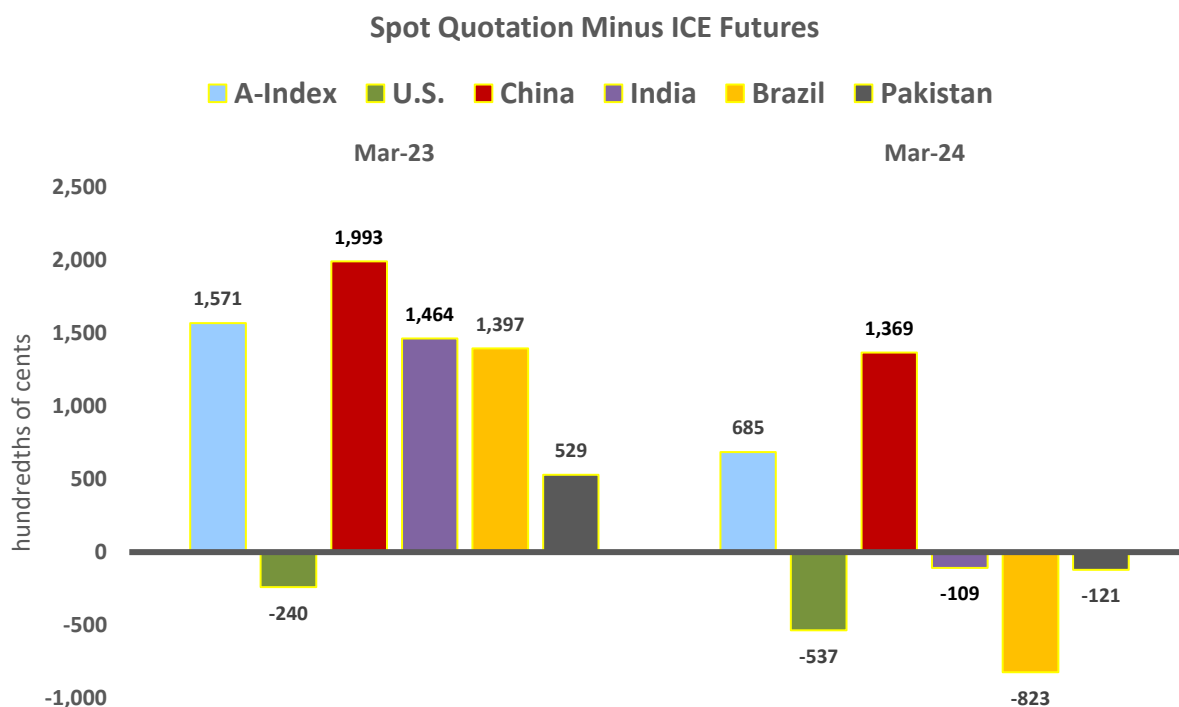

**China** prices are mostly unchanged at 108 cents per pound with the nearby futures contract on the Zhengzhou Commodity Exchange (ZCE) also rangebound at around 16,100 yuan. This is despite the significant rise in U.S. cotton futures and exhibits the contrasting supply situations between the two countries. Basis (relative to ICE) fell nearly 500 points this month to 1,400 and is down from last year.

**India** prices are up over 8 cents to around 94 cents per pound. Spinning mills' operating rates are reported to have climbed substantially since the beginning of the calendar year. Basis (to ICE) is up nearly 200 points this month but remains negative at around -100 points.

**Brazil** prices are up nearly 6 cents per pound to 86 cents and the highest level in 11 months. Basis is unchanged relative to last month at roughly -800 points and over 2,200 lower compared with last year. Current exportable supplies relative to the United States are significantly higher and continue to pressure basis.

**Pakistan** prices are more than 4 cents higher at 94 cents per pound due to strong demand for local supplies amidst ongoing issues with importing cotton. Basis is down slightly this month at around -100 points.

The observed **A-Index** this month includes the simple average of the following 5 origins: India, Brazil, Ivory Coast, Burkina Faso, and Australia. India is once again the lowest quoted origin at 97.25 cents per pound and more than 3 cents lower compared with the second-lowest origin Brazil; Australian is the highest at 103.00 cents. The A-Index relative to ICE is only 7 cents higher and down from the previous year's difference of 16 cents. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

### Weekly Cotton Prices

[Notes on Price Series](#)

### U.S. Cotton Exports

1,000 480-pound bales

Month-Year	<a href="#">U.S. Census</a>	<a href="#">USDA Export Sales Reporting</a>	Mid-point	Census Minus ESR
Aug-23	1,039	974	1,007	64
Sep-23	654	612	633	41
Oct-23	390	469	430	-79
Nov-23	558	550	554	8
Dec-23	1,106	985*	1,045	121
Jan-24	1,181	1,220*	1,201	-39
<b>TOTAL</b>	<b>4,927</b>	<b>4,811</b>	<b>4,869</b>	<b>116</b>

**Note:** \*A projected value and does not reflect the methodology of earlier observations. USDA Export Sales Reporting (ESR) is published in running bales and converted to 480-lb bales (multiplying each running bale by 1.03 to convert into a 480-lb statistical bale). In the table above, most months reflect the ending date of the reporting period and does not reflect the actual quantity shipped in the respective month. For example, Sep-23 includes shipments for weeks ending September 7, 14, 21, and 28; the weekly ESR report for September 28 includes shipments from Friday, September 22, 2023, through Thursday, September 28, 2023; shipments on September 29 and 30 are not included in the Sep-23 observation and instead included in Oct-23.

U.S. Census data is published in kilograms and converted to 480-lb bales monthly. Since 2017/18, the USDA methodology for forecasting and estimating marketing year (Aug. – Jul.) U.S. cotton exports is formulated by the simple average of U.S. Census and USDA ESR shipments during August - July. Please see [USDA Methodology for Calculating U.S. Cotton Exports](#) for more information. U.S. Census cotton exports have cumulatively exceeded USDA ESR by roughly 5 million bales since marketing year 2017/18. The U.S. Census data can be found on the USDA/FAS Global Agricultural Trade System ([GATS](#)) website in addition to the U.S. Census Bureau website found [here](#). USDA/FAS Export Sales Reporting can be found [here](#).

### China Cotton Yarn Futures Relative to Cotton

Note: \*A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

### Cotton Fiber Relative to Competing Fibers

Note: \*A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

(stephanie.galbraith@usda.gov)

## Notes on Price Series

**A-Index** is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1<sup>1/8</sup> inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

**U.S.** is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

**China** is the reported China Cotton Price Index (i.e., CCIIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

**India** is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

**Brazil** is strict low middling and reflects the delivered price to a mill in São Paulo.

**Pakistan** is the ex-gin (at the gin yard) price in Karachi reflecting a 1<sup>1/16</sup> inch staple and grade 3.

## Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

**Marketing Year:** August – July, for example, the 2023/24 marketing year is August 1 2023 – July 31 2024.

**Area Harvested:** The area of land planted to cotton from which seed cotton is harvested.

**Beginning Stocks:** The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

**Production:** The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

**Imports/Exports:** The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

**Domestic Use:** Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

**Ending Stocks:** The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024 of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year’s beginning stocks.

**Loss:** Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

### Other Terminology

**Cotton Textiles:** Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).<sup>1</sup>

**Cotton Products:** Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as [nonwoven products](#) (e.g., medical and hygiene products). When referencing “cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include

---

<sup>1</sup> Dyeing operations can occur anywhere between the manufacture of yarn, fabric, and end-product but typically at the fabric mill.

HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

**Garment Manufacturers:** Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

### Example of Cotton Supply Chain

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]  
The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
