

# Cotton: World Markets and Trade

## 2023/24 China Cotton Imports Surge to 11-Year High

Note: Marketing year 2024/25 reflects forecast imports from August 2024 – July 2025.

2023/24 China imports are forecast at the highest level in more than a decade at 14.8 million bales, more than double last year's volume.<sup>1</sup> Several factors have boosted demand: purchases for government reserves, lower domestic production, and lower foreign prices relative to domestic. China's 2023/24 imports are projected to account for more than one-third of global cotton imports, the highest share in more than a decade.

Sales of foreign cotton from government reserves earlier in the marketing year has been the main factor driving China's rising imports.<sup>2</sup> Imports for government reserves in 2023/24 are expected up roughly 3.0 million bales compared with last year and provide for one-third of China's total imports. These strategic imports are expected to exceed the level of 2023/24 sales from government auctions earlier in the marketing year. The total quantity of government reserves at the end of the marketing year is likely 4-5 months of consumption.

China's strategic reserve buys and sells both domestic and foreign cotton depending on potential market needs. The government has purchased less than 500,000 bales of domestic cotton in the past 3 years as imports have served to replenish inventories. Imported cotton is expected to comprise more than 90 percent of reserves in state-owned warehouses, and U.S. cotton is estimated to account for the majority.

Lower 2023/24 production and higher domestic use have also boosted import demand. China production is estimated to have fallen 3.0 million bales to 27.5 million while domestic use is the highest in 3 years at 38.5 million bales. Lower import prices (e.g., A-index) relative to domestic have also driven demand. The domestic cotton price (delivered to a Chinese mill) has been roughly 5 cents higher compared with imports (including the customs cleared 1-percent import tariff and 9-percent Value

<sup>1</sup> See the July 2023 article titled [2022/23 China Imports Fall to 5-Year Low](#) for more information.

<sup>2</sup> See the December 2023 article titled [2023 China Reserve Sales Surpass 4.0 Million Bales](#) for more information.

Added Tax) since last August. In contrast, last year's domestic cotton price was 8 cents lower on average compared with a customs cleared A-Index.

With China's beginning stocks rising nearly 4.0 million bales to 41.0 million, 2024/25 imports are forecast to fall nearly 3.0 million bales to 12.0 million. With government reserves and cotton in consignment at relatively high levels, imports are expected to fall but remain above the 5-year average. Three factors will ultimately influence the final level of 2024/25 imports – final production, whether the government conducts sales of reserves and the level of potential sales, and the price differential between imported and domestic cotton during the marketing year.

## 2024/25 Outlook

Production is forecast up less than 100,000 bales to 119.1 million due to increased production in Burma. Global consumption is raised slightly to 116.9 million bales on a 100,000-bale increase in Vietnam consumption that offsets smaller reductions in other countries.

Global trade is stable at 45.0 million bales as higher Australia and Kazakhstan exports offset reductions in India and China. Global ending stocks are projected up nearly 500,000 bales to 83.5 million on higher U.S. beginning stocks.

The U.S. season-average farm price for 2024/25 is forecast down 4 cents to 70 cents per pound.

## 2023/24 Outlook

Global production is raised more than 200,000 bales to 113.8 million on a higher India crop. Consumption is forecast down nearly 300,000 bales to 113.1 million. Decreased use in Turkey, Pakistan, and Brazil offsets increased use in India and Vietnam.

Global exports are forecast down 200,000 bales to 44.3 million. U.S. exports are lowered by 500,000 bales and Brazil exports are raised 300,000, marking the first time the United States is not the top exporter since MY 1992/93. Lower Turkey and Pakistan imports offset higher Vietnam imports.

Global ending stocks are forecast up nearly 500,000 bales to 81.0 million, mostly due to the reduction in U.S. exports and historical revisions to Kazakhstan consumption.

The U.S. farm price remains at 76 cents per pound.

#### **2024/25 Trade Outlook (1,000 480-lb Bales)**

##### **Major Importers:**

|                | Previous | Current       | Change | Reason             |
|----------------|----------|---------------|--------|--------------------|
| <b>WORLD</b>   | 44,946   | <b>44,951</b> | 5      |                    |
| <b>Vietnam</b> | 7,000    | <b>7,100</b>  | 100    | Higher consumption |

##### **Major Exporters:**

|                  | Previous | Current       | Change | Reason                     |

| <b>Kazakhstan</b>    | 300      | <b>400</b>    | 100    | Export data |

## Futures and Spot Prices

Since the last WASDE report, cotton futures on the Intercontinental Exchange (ICE) fell to their lowest level since December 2020 before settling at roughly 72 cents per pound. Better U.S. cotton crop conditions relative to last year and slower-than-expected U.S. shipments have pressured prices. Speculative participants continued to liquidate and sell greater volumes of cotton futures as basis remains low relative to futures. The latest Commodity Futures Trading Commission *Commitment of Traders* supplemental [report](#) for futures and options showed the net long position for both Non-Commercial and Index falling to roughly 30,000 contracts compared with over 60,000 contracts in early May (one contract is roughly 100 bales) and over 140,000 in March.

### Weekly ICE Cotton Futures and Bloomberg Commodity Spot Index

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

### Changes Since May WASDE (cents per pound)

|        | A-Index | U.S. | China | India | Brazil | Pakistan |
|--------|---------|------|-------|-------|--------|----------|
| 8-May  | 85.4    | 71.8 | 104.1 | 87.7  | 74.7   | 86.0     |
| 10-Jun | 83.7    | 64.3 | 102.0 | 85.5  | 73.6   | 86.1     |
| Change | -1.7    | -7.5 | -2.1  | -2.2  | -1.1   | 0.1      |

**U.S.** prices are down significantly relative to other major origins to roughly 64 cents per pound. Basis is mostly unchanged with Southeast at -325 basis points and North Delta increasing to -375. West Texas-Kansas-Oklahoma rose to -1,000 from -1,200, and the average basis across U.S. regions is roughly -750 points compared with -825 last month. The Agricultural Marketing Service recorded roughly 17,000 bales of spot transactions since last month's WASDE, far below last year's level of nearly 90,000.

**China** prices are down 2 cents to 102 cents per pound with the nearby futures contract (September) on the Zhengzhou Commodity Exchange (ZCE) down 500 yuan to roughly 15,000, partly reflecting the significant decline in U.S. cotton futures. Basis (relative to ICE) rose for the third consecutive month to over 3,000 points and remains significantly higher compared with all other observed origins.

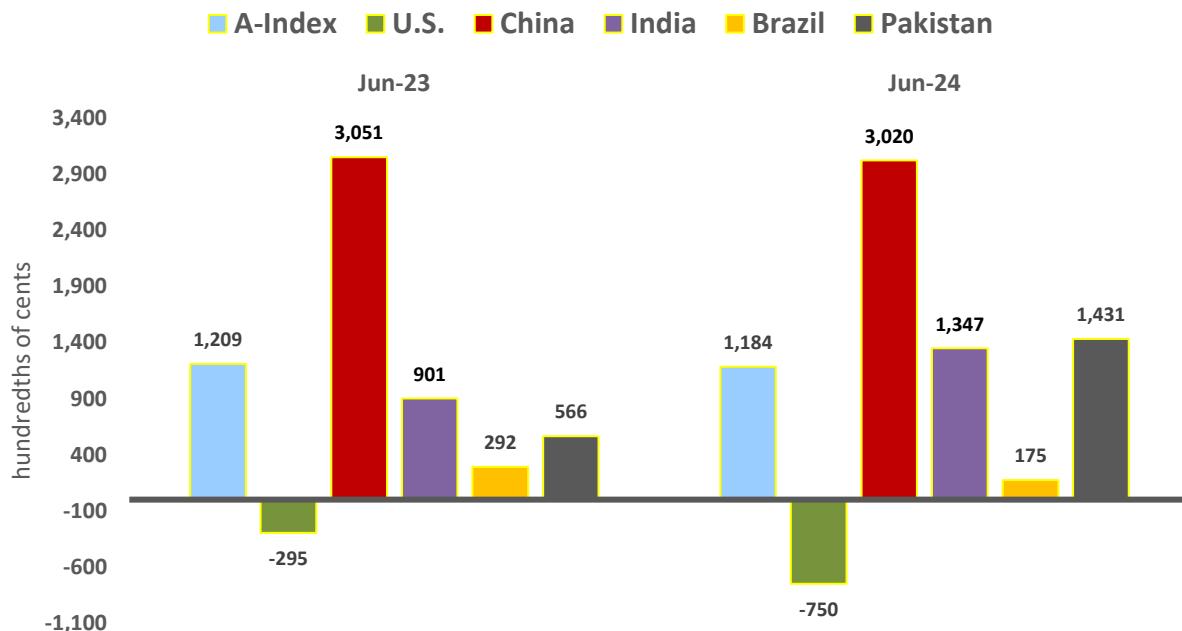

**India** prices are also down 2 cents, settling at roughly 86 cents per pound. Spinning mills continue to operate at elevated levels as 2023/24 consumption projections are raised this month to 24.8 million bales. Basis (to ICE) is up 400 points this month to around 1,350 points, above last year and significantly higher relative to 4 months prior when basis was -600.

**Brazil** prices are mostly unchanged at 74 cents despite the steep decline in ICE futures. The pace of 2023/24 Brazil exports are stronger-than-expected as the country is expected to surpass the United States as the largest exporter. The United States has been the largest exporter since the early 1990s.

**Pakistan** prices are unchanged at 86 cents per pound. Basis (to ICE) is up more than 600 points this month to around 1,400 points and nearly 1,000 points higher relative to last year.

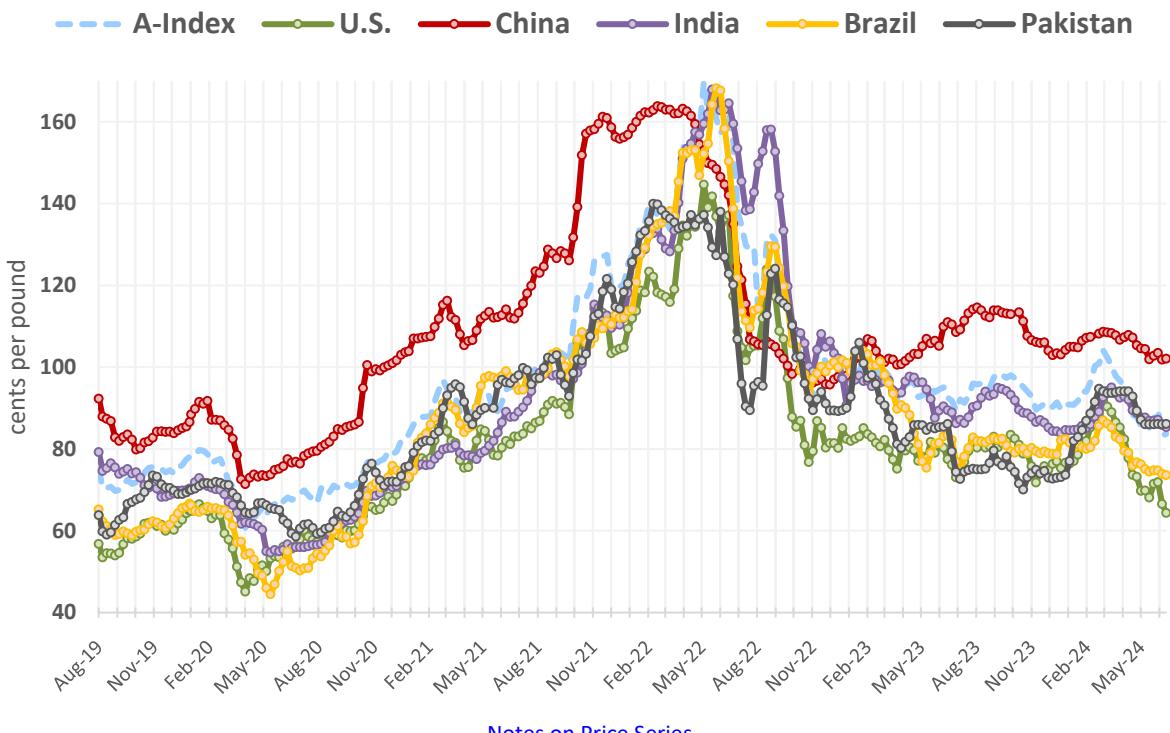

The observed **A-Index** this month includes the simple average of the following 5 quotes: Brazil, Ivory Coast, Burkina Faso, Memphis/Orleans/Texas, and Memphis/Eastern. Brazil is once again the lowest quoted origin at 79.25 cents per pound; Memphis/Eastern is the highest at 83.25 cents. The A-Index relative to ICE is around 12 cents higher and unchanged from the previous year. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

#### Spot Quotation Minus ICE Futures (2023 vs. 2024)

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

## U.S. Cotton Exports

1,000 480-pound bales

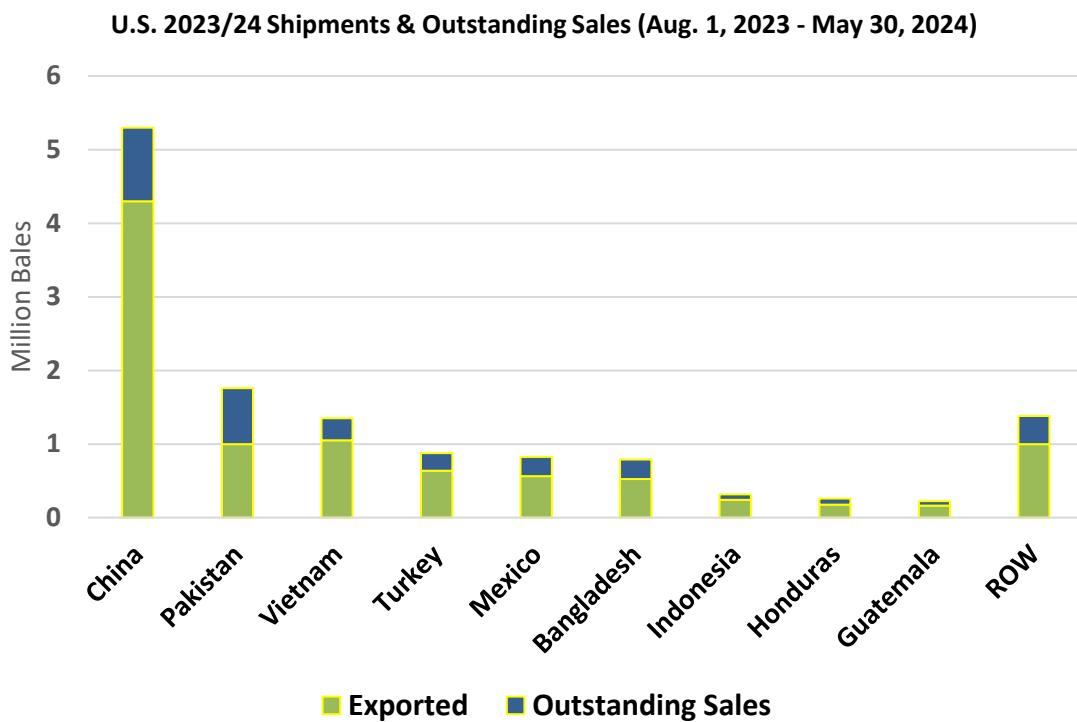

| Month-Year   | <a href="#">U.S. Census</a> | <a href="#">USDA Export Sales Reporting</a> | Mid-point | Census Minus ESR |
|--------------|-----------------------------|---|-----------|------------------|
| Aug-23       | 1,039                       | 974   | 1,007     | 64               |
| Sep-23       | 654                         | 644   | 649       | 10               |
| Oct-23       | 390                         | 507   | 449       | -117             |
| Nov-23       | 558                         | 480   | 519       | 77               |
| Dec-23       | 1,106                       | 985   | 1,045     | 120              |
| Jan-24       | 1,181                       | 1,220                                       | 1,201     | -39              |
| Feb-24       | 1,535                       | 1,222                                       | 1,378     | 314              |
| Mar-24       | 1,634                       | 1,606                                       | 1,620     | 28               |
| Apr-24       | 1,210                       | 1,111                                       | 1,161     | 99               |
| <b>TOTAL</b> | <b>9,307</b>                | <b>8,750</b>                                | 9,029     | 557              |

Note: USDA Export Sales Reporting (ESR) is published in running bales and converted to 480-lb bales (multiplying each running bale by 1.03 to convert into a 480-lb statistical bale). In the table above, the month listed for ESR is an FAS computation.

USDA/FAS Export Sales Reporting can be found [here](#).

U.S. Census data is published in kilograms and converted to 480-lb bales monthly. Since 2017/18, the USDA methodology for forecasting and estimating marketing year (Aug– Jul) U.S. cotton exports is formulated by the simple average of U.S. Census and USDA ESR shipments during August–July. Please see [USDA Methodology for Calculating U.S. Cotton Exports](#) for more information. U.S. Census cotton exports have cumulatively exceeded USDA ESR by more than 5 million bales since marketing

year 2017/18. The U.S. Census data can be found on the USDA/FAS Global Agricultural Trade System ([GATS](#)) website in addition to the U.S. Census Bureau website found [here](#).

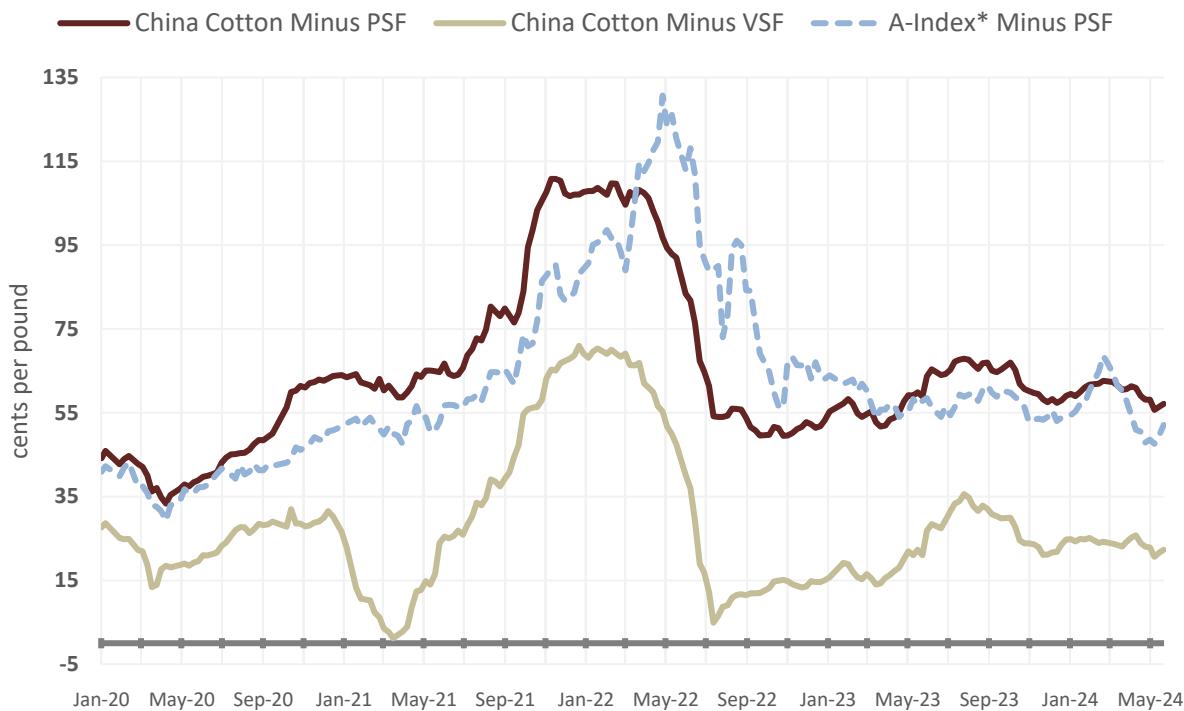

Source: USDA FAS Export Sales Reporting (ESR); Note: ROW (Rest of World)

Note: \*A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

### Cotton Fiber Relative to Competing Fibers

Note: \*A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

Stephanie Galbraith – Foreign Agricultural Service

(stephanie.galbraith@usda.gov)

## Notes on Price Series

**A-Index** is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1<sup>1/8</sup> inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

**U.S.** is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

**China** is the reported China Cotton Price Index (i.e., CCIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

**India** is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

**Brazil** is strict low middling and reflects the delivered price to a mill in São Paulo.

**Pakistan** is the ex-gin (at the gin yard) price in Karachi reflecting a 1<sup>1/16</sup> inch staple and grade 3.

**Production, Supply, and Distribution (PSD) Attributes for Cotton**

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

**Marketing Year:** August – July, for example, the 2023/24 marketing year is August 1, 2023 – July 31, 2024.

**Area Harvested:** The area of land planted to cotton from which seed cotton is harvested.

**Beginning Stocks:** The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1, 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

**Production:** The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

**Imports/Exports:** The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

**Domestic Use:** Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

**Ending Stocks:** The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024, of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year’s beginning stocks.

**Loss:** Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

**Other Terminology**

**Cotton Textiles:** Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).<sup>3</sup>

<sup>3</sup> Dyeing operations can occur anywhere between the manufacture of yarn, fabric, and end-product but typically at the fabric mill.

**Cotton Products:** Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as nonwoven products (e.g., medical and hygiene products). When referencing “cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

**Garment Manufacturers:** Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

#### Example of Cotton Supply Chain

[Farm] Cotton planted → [Farm] Cotton harvested → [Gin] Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) → [Spinning Mill] Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) → [Fabric Mill] Yarn woven or knit into fabric → [Fabric Mill] Fabric is dyed and processed → [Garment Manufacturer] Finished fabric is cut-and-sewn into apparel or other finished product → [Retailer]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
