U.S. Soybean Oil Price Premium Declines

The U.S. soybean oil price premium compared to other major exporters has declined, and the United States is expected to be a net soybean oil exporter in 2024/25. The price premium in the past couple of years was driven by higher domestic demand for soybean oil in biofuel production, particularly for increased renewable diesel production headed to the California market.

The premium U.S. soybean oil held over Argentine soybean oil peaked in the summer of 2023 as renewable diesel production ramped up. Since then, the share of soybean oil used in biofuels has decreased in part due to higher use of other feedstocks, such as tallow, yellow grease, and used cooking oil, which are incentivized under California policy. For comparison, soybean oil declined from near 45 percent of feedstock consumption in early 2022 to below 35 percent in early 2024.

U.S. soybean oil production is forecast at another record in 2024/25 driven by a 4 percent increase in domestic demand. The United States is expected to be a net exporter of soybean oil, with lower imports and a modest recovery in soybean oil exports from the multi-decade lows of the past 2 years. U.S. soybean oil ending stocks are forecast up 10 percent while prices are forecast to decline.

Early 2024 Global Soybean Meal Exports Rise

Source: Trade Data Monitor, LLC; FAS-GATS; FAS-Export Sales Reporting;

The 2024 soybean harvest in South America is coming to an end and soybean complex prices continue to be pressured. Global supplies are larger compared to last year when soybean production declined in Argentina due to drought. With soybean meal export prices down compared to the prior year, global protein meal demand has picked up and lifted exports.

Combined soybean meal exports between January and May 2024 for Argentina, Brazil, and the United States are estimated at nearly 27 million tons, over 20 percent higher compared to the same period last year. As expected, most of this growth was recorded for Argentina, where recovery from last year's drought has enabled higher soybean crush. In Brazil, despite headwinds of a smaller soybean crop, crush has been at a record high.

Meanwhile, the United States benefited from weaker competition from Argentina during the first quarter of the year and pushed January-May exports to new highs, 16 percent above the same timeframe last year. Seasonal recovery in competition from South America may affect future meal exports from the United States. However, with expanded crush capacity and new players entering the market, U.S. soybean meal is likely to remain attractive to global buyers.

OVERVIEW 2024/25

The global oilseeds production forecast is lowered over 1 million tons to almost 686 million tons this month almost entirely on a reduced Australia rapeseed outlook. Similarly, global oilseeds trade is down on lower Australia rapeseed exports. Oilseed ending stocks are forecast down almost 1 million tons on reduced stocks of Brazil soybeans and global rapeseed. Global crush is trimmed on reduced rapeseed utilization. Global meal trade is up almost 200,000 tons on higher U.S. soybean meal exports. Global vegetable oil trade is down slightly on reduced EU and UAE rapeseed oil exports.

The projected U.S. season-average farm price for soybeans is unchanged at \$11.20 per bushel.

OVERVIEW 2023/24

The global oilseeds production forecast is lowered this month on reductions in Brazil soybeans and India peanuts which outweigh an increase in Ukraine rapeseed. Global oilseeds trade is up slightly on higher Ukraine rapeseed exports exceeding lower Canada rapeseed exports. World ending stocks are down almost 600,000 tons due to a decline in Brazil soybean stocks. Oilseed crush is trimmed on lower India peanut crush. Global protein meal exports are higher on larger soybean meal exports from the United States and India. Vegetable oil trade is largely unchanged.

The projected U.S. season-average farm price for soybeans is unchanged at \$12.55 per bushel.

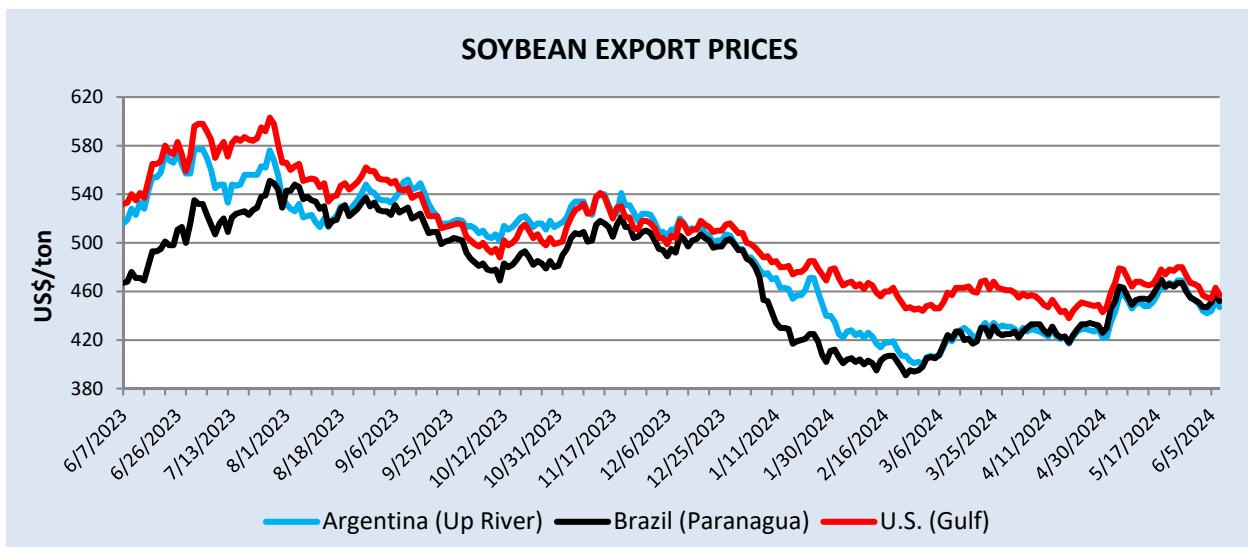

EXPORT PRICES

Soybean prices for major exporters declined since the last WASDE report on improved U.S. plantings and ample global supply projections. Soybean meal prices also declined following weaker soybean prices and ample supplies from the major meal producers. There was significant appreciation in South America soybean oil prices, primarily driven by strong domestic demand in Brazil. Weather-related concerns with the European rapeseed crop also boosted vegetable oil prices.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
