

Oilseeds: World Markets and Trade

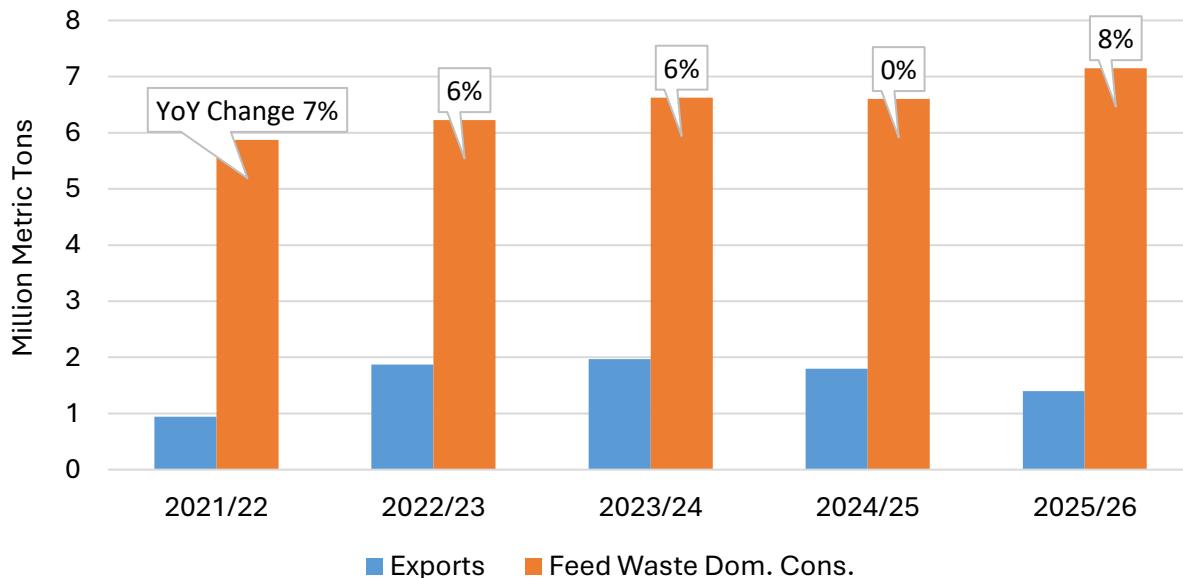

India Soybean Meal Consumption Tempered by Ethanol Expansion

This month, India soybean meal consumption was revised down for marketing years 2024/25 and 2025/26 due in part to increased utilization of DDGS (dried distiller grain solubles). In the past couple of years, DDGS production in India has significantly increased as a result of changes in the National Biofuels Policy E20 mandate. In May 2022, the implementation of E20 was expedited from 2030 to 2025 targeting 15 billion liters of ethanol production capacity for 2025.

Sugarcane is the primary feedstock utilized to achieve the mandate, but corn utilization has significantly increased over the past 2 years. India's production of corn DDGS has risen as a result of expanded ethanol production, causing many feed producers to partially substitute DDGS in place of soybean meal due to lower cost. Based on Indian export data, soybean meal unit values were \$416/ton in March 2025, compared to \$225/ton for DDGS. The rapid implementation of India's ethanol policy is expected to hold soybean meal consumption flat in 2024/25. In 2025/26, soybean meal consumption is expected to increase in line with slower growth in DDGS supply due to the ethanol mandate nearing target levels.

Lower domestic soybean meal consumption has led to an uptick in exportable supplies. Therefore, India soybean meal exports are raised this month to 1.8 million tons in 2024/25 and 1.4 million in 2025/26. So far in 2024/25, India soybean meal exports have primarily been shipped to the EU, Bangladesh, and Nepal.

India Soybean Meal Consumption and Exports

OVERVIEW 2025/26

The global oilseeds production forecast is raised this month on higher China cottonseed, Malaysia palm kernel, and European Union rapeseed outlook, more than offsetting reductions for India and Pakistan cottonseed. Global oilseeds trade is down slightly on lower Canada rapeseed exports. Global oilseeds crush is up, driven by Malaysia palm kernel crush. Global oilseeds ending stocks are forecast higher, largely due to raised China soybean stocks. Global oilseed meal trade is raised on higher India soybean meal and Malaysia palm kernel meal exports. Global vegetable oil trade is raised on higher Malaysia palm oil exports.

The projected U.S. season-average farm price for soybeans is unchanged at \$10.25 per bushel.

OVERVIEW 2024/25

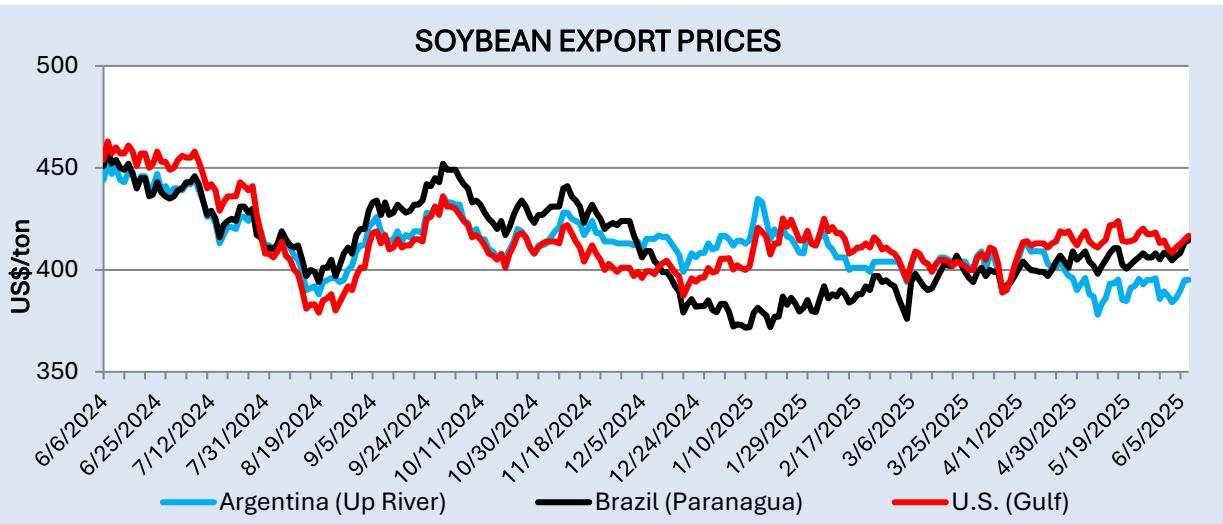

Global oilseeds production is raised this month as reduced India cottonseed production is more than offset by higher production for Malaysia palm kernel, Argentina sunflowerseed, and Australia rapeseed. Global oilseeds trade is raised due to higher Canada and Australia rapeseed and European Union sunflowerseed exports. Global oilseeds crush is down largely due to lower China soybean crush. Global oilseeds ending stocks are raised on higher China soybean carryout. Global oilseed meal trade is up on higher India soybean meal and European Union rapeseed meal exports. Global vegetable oil trade is raised on higher Malaysia palm oil and Turkey sunflowerseed oil exports, offsetting reductions for Canada rapeseed oil exports.

The projected U.S. season-average farm price for soybeans is unchanged at \$9.95 per bushel.

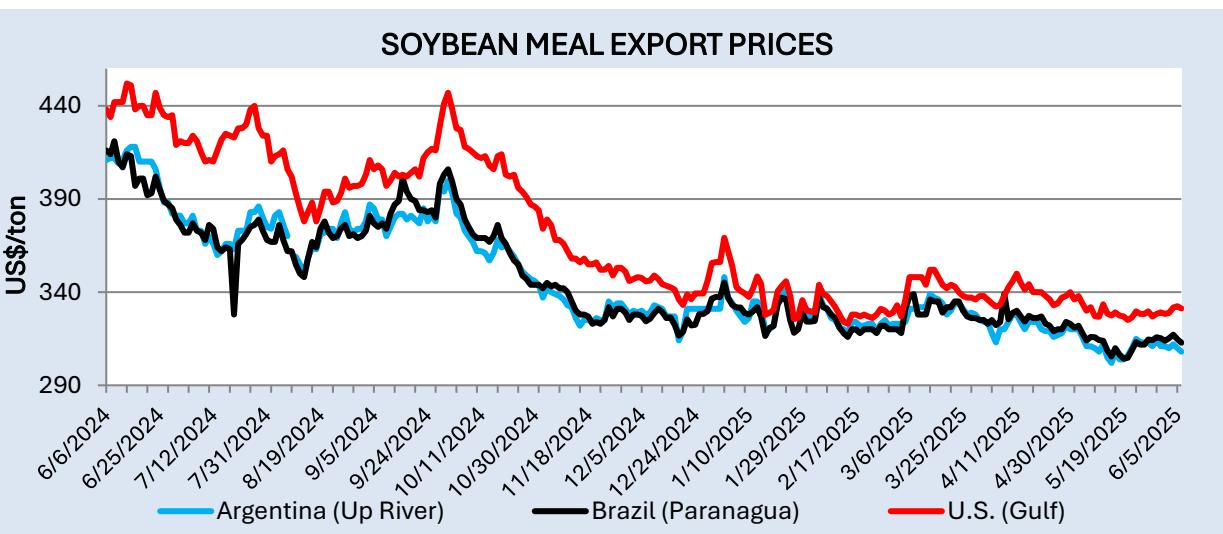

EXPORT PRICES

Since the last WASDE report, soybean export prices have slightly increased as demand accelerates for South American soybeans. Argentina maintained its position as the most price competitive as exporters take advantage of the current export tax policy. Brazil soybeans narrowed their price advantage over U.S. soybeans in early June as the Brazil real strengthens. Soybean meal export prices remained largely unchanged since last month.

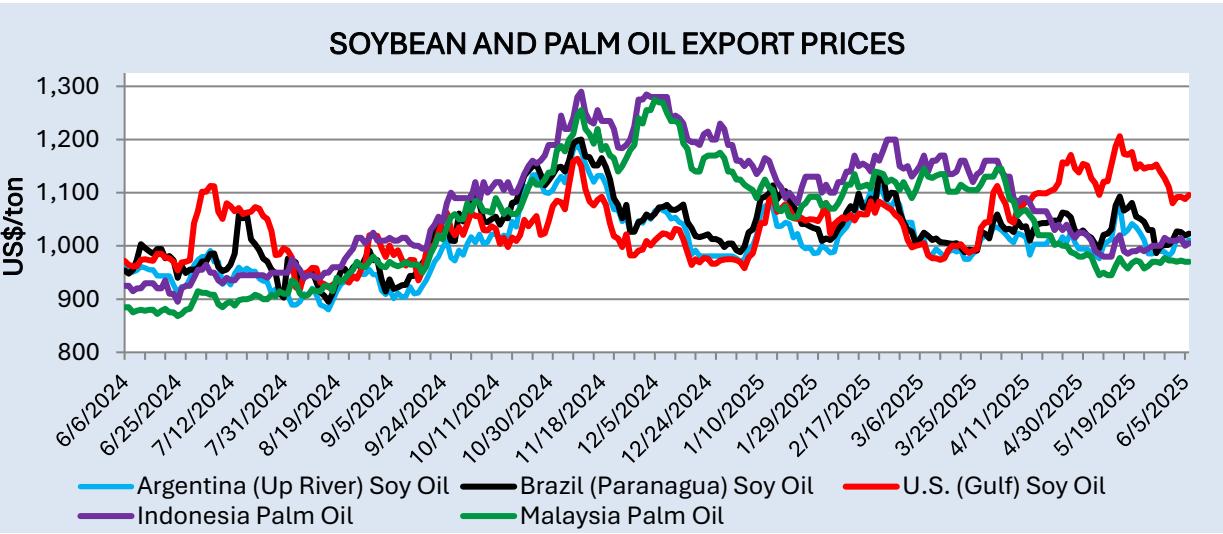

Following price fluctuations due to the Renewable Volume Obligation (RVO) uncertainty, U.S. soybean oil prices maintained a premium over South American soy oils. Soy oil prices from South America strengthened as adverse weather conditions in Argentina and logistics challenges in Brazil slowed soybean crushing in the region. Palm oil export prices for both Indonesia and Malaysia fell below soy oils at the start of June. Month-to-month, palm oil prices strengthened alongside South American soy oils, but maintained competitiveness as production increases and exports pick up seasonally.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
