EU Soybean Meal Imports Signal Another Year of Strong Demand

Source: Trade Data Monitor, LLC.
*Estimated using exporter data

This month, USDA raised the 2025/26 (October – September) EU soybean meal import forecast by 1.0 million tons to 19.5 million, moving closer to last year’s decade-high of 20.6 million tons. EU-reported soybean meal imports for the first 2 months of the marketing year show a strong 3.9 million tons, keeping pace with last year. Analyzing data reported by major soybean meal suppliers – including Brazil, Argentina, India, and Ukraine – with appropriate lags to approximate delivery time, EU imports through February are expected to continue at last year’s pace.

The EU’s large soybean meal imports in 2024/25 were on top of strong soybean imports, enabling the highest soybean meal consumption since 2008/09. Increased soybean meal usage rose in part to offset reduced availability of rapeseed and sunflowerseed meals as well as feed wheat, another alternative protein source, due to below-average production of these crops in 2024/25. Low global soybean meal prices made soybean meal an attractive alternative for feed producers. EU import unit values (CIF) averaged below \$400/ton for the first time since 2019/20, declining from a peak of \$550/ton in 2022/23.

In 2025/26, soybean meal consumption is expected to remain strong, though its share with respect to other oilseed meals is reduced from last year. Large EU rapeseed and wheat crops are expected to enable a recovery of their feed usage. However, global soybean meal prices remain low, which should continue through 2025/26 as record harvests in South America enable further crushing and export of soybean meal. Price competitiveness driven by record global soybean meal production will have a major positive influence on EU imports of soybean meal in the remaining months of the marketing year.

DATA SERIES REVISIONS

Norway Rapeseed Oil

Norway rapeseed oil domestic consumption is revised from 2005/06 to 2025/26 to reflect feed usage for aquaculture. Food, industrial, and feed use attributes have been modified. See [Post report](#)¹ for more information.

OVERVIEW 2025/26

Global oilseeds production is raised this month on Brazil and Paraguay soybeans. Global oilseeds trade is increased on higher Canada rapeseed exports and EU sunflowerseed exports, more than offsetting lower Australia rapeseed exports. Global crush is up on higher Brazil and Paraguay soybean crush.

Global oilseeds stocks increased on higher Brazil soybean carryout. Global protein meal trade is raised on higher Brazil soybean meal exports. Global vegetable oil trade is raised on increased Malaysia palm oil and larger global soybean oil exports from major suppliers. Vegetable oil stocks are unchanged.

The projected U.S. season-average farm price for soybeans is unchanged at \$10.20 per bushel.

EXPORT PRICES

China's recent soybean purchases, a weakening U.S. dollar, and expectations of supportive biofuel policies pushed U.S. soybean prices to a 2-month high. Meanwhile, favorable crop reports and weather conditions in Brazil bolstered expectations for a record soybean harvest, widening the price gap between U.S. and Brazilian origins. Soybean meal prices held steady despite increased crushing activity, as declining Brazilian soybean prices kept meal prices subdued.

Vegetable oil markets rallied over the past month. Rising petroleum prices and optimism surrounding U.S. biofuel policy boosted soybean oil prices across all origins, with U.S. premiums climbing. Palm oil followed suit with Malaysia's discount to Indonesia narrowing amid falling Malaysian stocks.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
